SARM offers an assortment of rat control baits to combat your pest problems:

Warfarin Rat Control

Warfarin products have traditionally been considered the safest, most effective, and most economical products for the control of rats by professionals in the field.

Warfarin Ready-Mixed Bait is Warfarin mixed with rolled oats, a natural rat food, with added sweeteners for greater attraction. Warfarin Ready-Mixed Bait has a proven record of effectiveness at a very reasonable cost.

Ratak Rat Control

Ratak is a product that will kill rats with one feeding. In comparison to similar products, Ratak rates as number one in kill factor, acceptability, and packaging.

Ratak contains the anti-coagulant Brodifacoum, which delays death for four to five days after feeding to eliminate bait shyness, and it contains a sweetener to increase rat appeal. Ratak is also available in a smaller-sized pellet. This pellet discourages bait storage, is more likely to be consumed, and is also properly labelled and registered for "on-farm use".

Ramik Green

Ramik Green is a very effective product that can be used for mice, rat, and ground squirrel control. The product has many advantages to consider:

- Can be used in wet or dry conditions, both indoors and outdoors
- Fish-flavoured
- Added mold inhibitor
- No paraffin wax
- Pellet form
- Proven diphacinone .005%
- Contains an anticoagulant

2% Liquid Strychnine Concentrate

2% Liquid Strychnine is a strong poison used to control significant infestations of Richardson Ground Squirrels. As it is a poison, it is applied according to the registration and product label.
